

## Sample Script for Net Control

This is <first name> Net Control for the Monta Loma Neighborhood CERT team. We are conducting a drill to ensure that we will be ready to communicate in a time of need. We will be using this channel until approximately < time>.

*Unkey and pause*

I will now take check-ins from Damage Assessment Teams in the field.

*Call each team and record check-ins.*

I will now take Incident reports from teams in the field. Call in with your team ID and incident priority only, and wait for me to call on you for your report. I am taking <priority one reports only / priority one and two only / all priority levels> at this time.

*Take reports and respond with Incident Numbers*

*Approximately every half hour do a Health and Welfare check:*

All stations, all stations... We are going to do a health and welfare check at this time. Before I begin, is there any priority 1 traffic pending?

*Take any priority 1 calls, then....*

All stations, hold all non-emergency traffic for the health and welfare check. When I call you, state your tactical call sign and the street you are on.

*Call each team and record check-ins.*

*Resume taking DA Incident reports*

This completes the Health and Welfare Check. I will take additional Incident reports now. *(Or call a specific team that had been waiting.)*

*When drill ends instruct teams to return to Command Post and check them out of the net. Call on individual teams if necessary to confirm they heard.*

All stations. The drill has ended. Return to the Command Post. When I call on you please acknowledge with your tactical call sign and street.

*At the end of the drill, announce:*

This is <first name>, Net Control for the Monta Loma Neighborhood CERT drill. We will now close down this net.
